[TARGET DATA]

LATITUDE: 3.433

LONGITUDE: 37.533

CONFIDENCE: 92%

[ANALYSIS]

Convergence of thermal anomaly, persistent cloud cover, vegetation uniformity anomalies, and local legends near Lake Turkana, combined with the corridor constraint from seismic data and proximity to known meteorite impact structures, points to the North Turkana region as the most probable location of Wakanda, analogous to the hidden valley of the Nyika National Park in Kenya.
