[TARGET DATA]

LATITUDE: 1.2833

LONGITUDE: 30.0667

CONFIDENCE: 85%

[ANALYSIS]

The Virunga Mountains, spanning across Uganda, Rwanda, and the DRC, offer the required terrain for natural concealment. The area has numerous conservation zones, including the Virunga National Park, which could serve as cover for a hidden perimeter. Local legends from multiple tribes describe a 'hidden kingdom' in the region. The nearby Kibale crater, a suspected meteorite impact structure, could be the source of Vibranium. The city of Butembo, near the center of the Virunga Mountains, provides a strategic location for the capital, close enough to access the Vibranium yet far enough to avoid detection.
